This is your guide to one of the most comprehensive sets of tools that will help improve your computer's stability and make it run more smoothly.

Installing TweakBit FixMyPC

Before installation, please make sure your computer meets the following minimum system requirements:

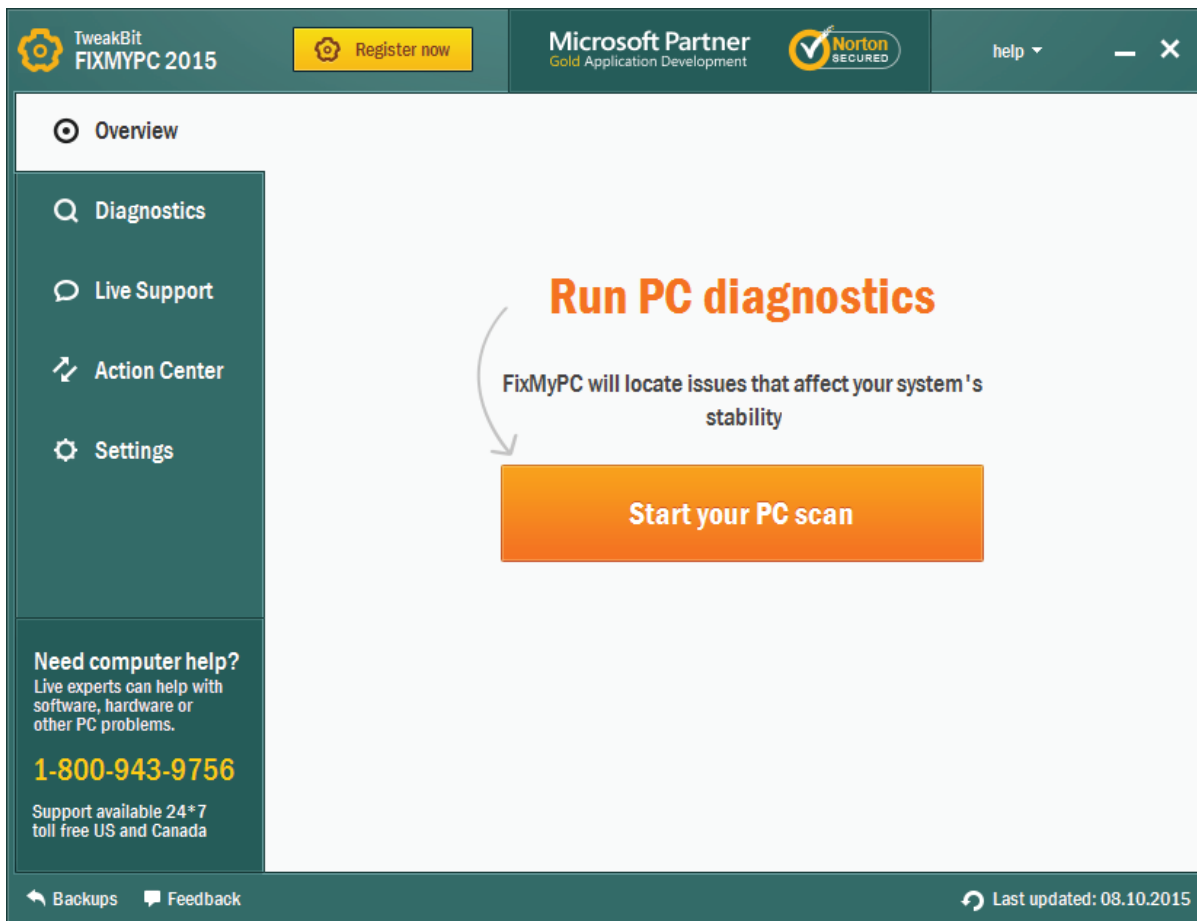

- Windows 10, 8 (32 or 64 bit), Win 7 (32 or 64 bit), Vista SP2 (32 bit only), XP SP3 (32 bit only)
- 50 MB of available disk space
- 512 MB RAM

The installation process is very straightforward and won't take more than a minute to finish. To start installation, please press the **'Click to Install and Diagnose PC'** button. Before you do that, you can also check additional installation options by clicking on **'more options'**.

Overview Window and Your First Scan

The program will launch automatically when installation completes. Start a full system scan immediately by clicking on **'Start Your PC Scan'**

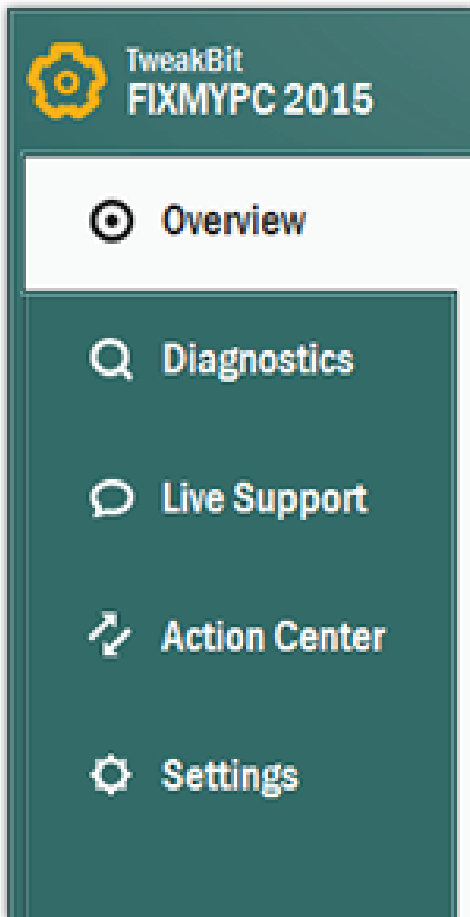

While scanning, TweakBit FixMyPC looks for issues that may affect your computer's stable operation and cause random stalls or crashes. These issues are split into four basic categories.

- Broken Shortcuts.** Some registry shortcuts may point to items that no longer exist or have been moved to a different location.
- Help Files.** Over time, the Registry may amass enough invalid records for history and help files to cause significant performance problems.
- Missing Software.** Corrupt registry entries related to installed software may cause serious malfunctions in some applications.
- System Issues.** Other common registry issues that may affect overall performance and stability of your system.

The scan results will be displayed under the Diagnostics tab. You will be able to review them in detail by clicking the **'Detailed list'** link next to each category. This will let you uncheck any items you may not want to be deleted or items you are not sure about and want to research further. Once done reviewing the details, click the **'Fix all issues'** button to complete repair.

Besides the Overview and the Diagnostics tabs, the main program window has several other tabs that help the user easily navigate the program.

Live Support

The Live Support tab lets you get live assistance with any issues you may have with the program, as well as with any other problems your PC may be facing. This includes virus infections, connectivity issues and so on. Assistance with the licensed version of FixMyPC is free of charge.

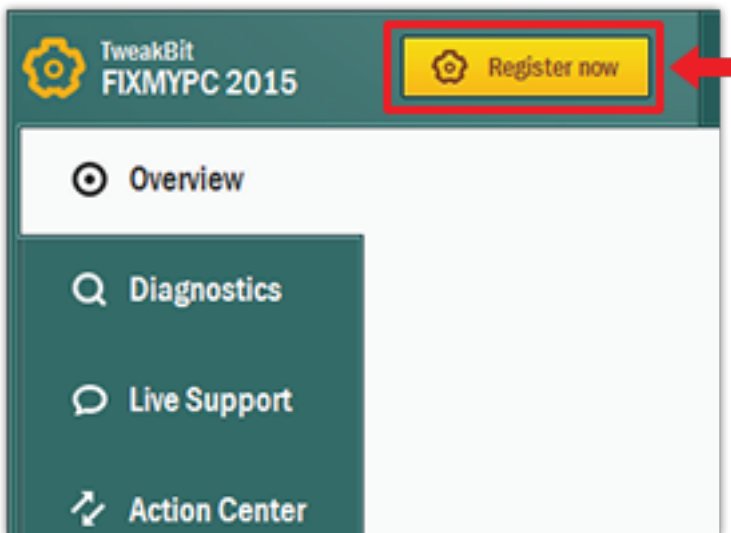

Action Center

The Action Center tab lists recommendations for additional software programs to install for a greater effect on performance and a better user experience. You may install any of the recommended programs at a click of a button.

Settings

The Settings tab lets you configure program behavior and set up automatic maintenance tasks to keep your computer error free and stable on a permanent basis.

You will need to register your product to unlock full functionality.

After purchase, you will receive an email with your license code.

- Click on **'Register now'** at the top of the main program window. A pop-up will prompt you to enter your license code.

- Find the license code that was sent to you in your order confirmation email.

- Copy and paste* it directly into the registration field.

- Once the license code has been entered, click **'Register'**. You will receive a confirmation that the application has been successfully activated.

*** To copy and paste:**

Highlight the license code by clicking the left mouse button in front of it and then dragging it to the right, until you have covered all of it.

When done, right-click on the highlighted area and select **'Copy'**.

Go back to TweakBit FixMyPC. Now you will need to right-click inside the registration field and choose **'Paste'**.

Should you have any questions about TweakBit FixMyPC, don't hesitate to email our dedicated customer support team 24/7. We are always happy to help.

Thank you,

TweakBit
