This is your guide to one of the finest and easiest-to-use tools designed to optimize your computer's performance for specific tasks

Installing TweakBit PCBooster

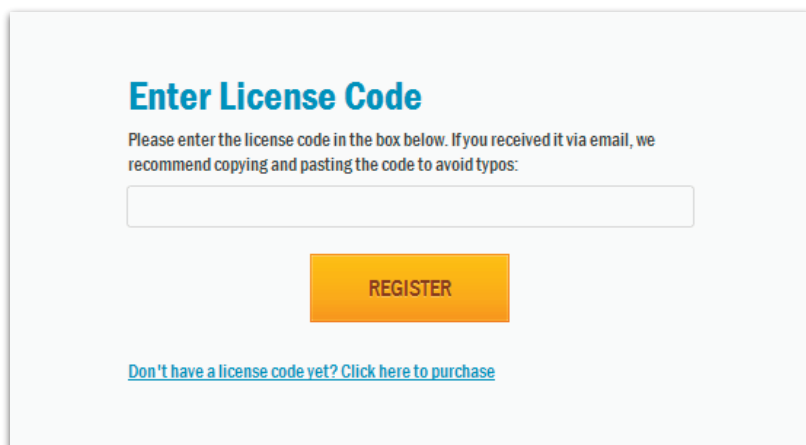

Before installation, please make sure your computer meets the following system requirements:

- Windows Win 8 (32 or 64 bit), Win 7 (32 or 64 bit), Vista SP2 (32 bit only), XP SP3 (32 bit only)
- 30 MB of available hard-disk space
- 256 MB RAM

The installation process is very straightforward and won't take more than a minute to finish. To start installation, please press the **'Click to Install and Give PC a Boost'** button. Before you do that, you can also check additional installation options by clicking on **'more options'**.

You will need to register your copy of Tweakbit PCBooster right after the installation to unlock its functionality.

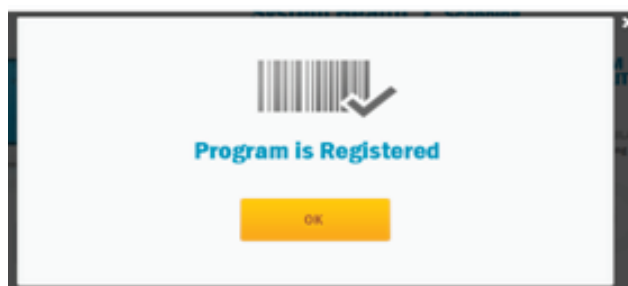

After purchase, you will receive an email with your license code.

Copy and paste it directly into the registration box that should pop up automatically when installation completes. If you don't see the pop-up, just double-click the program icon on your Desktop to launch PCBooster – this will bring up the registration window.

To copy and paste:

- 1 Highlight the license code by clicking the left mouse button in front of it and then dragging it to the right, until you have covered all of it.
- 2 When done, right-click on the highlighted area and select **'Copy'**.
- 3 Go back to TweakBit PCBooster. Now you will need to right-click inside the registration field and choose **'Paste'**.
- 4 Once the license code has been entered, click **'Register'**. You will receive a confirmation that the application has been successfully registered.

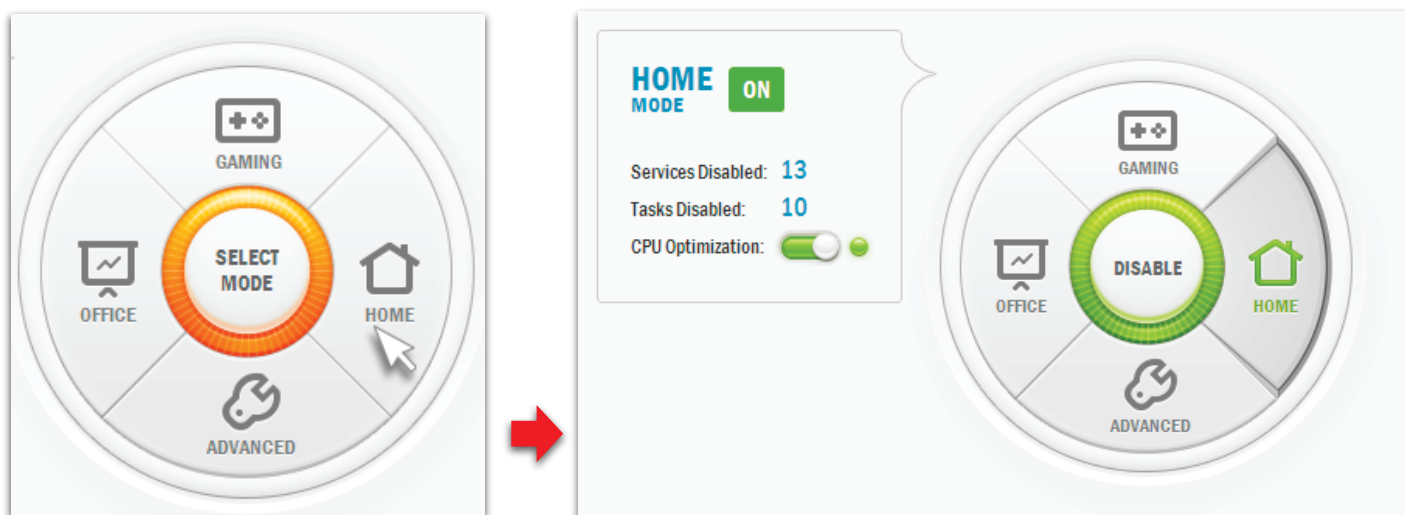

To start the program, double-click on the *TweakBit PCBooster icon* on your desktop. On the main (*Optimization*) tab you are offered to choose a mode that suits your current needs:

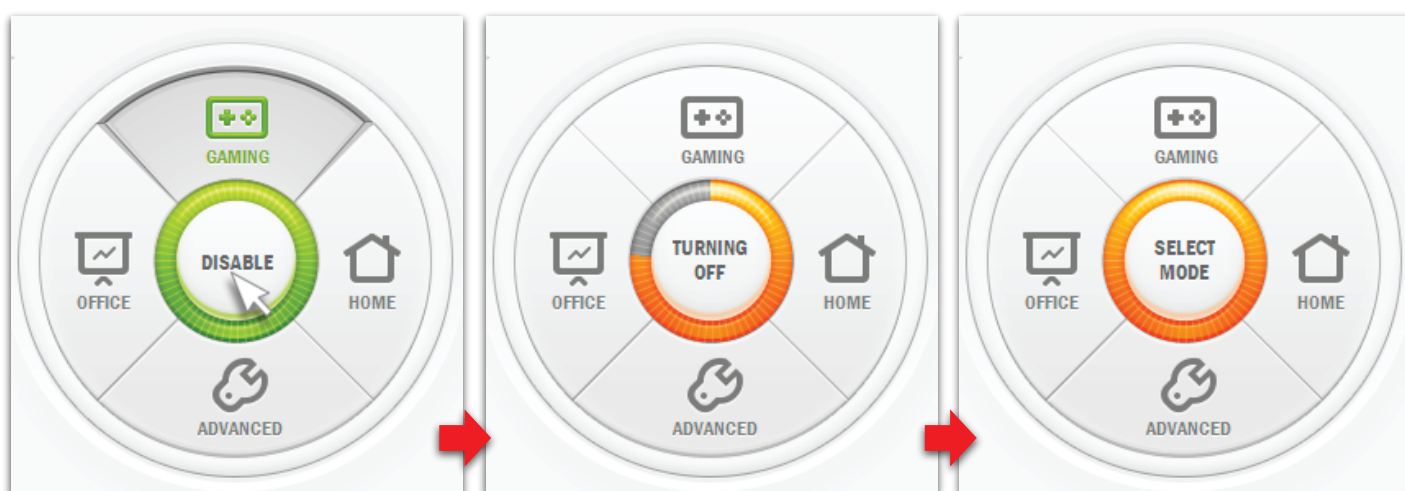

- 1 Gaming mode.** All unnecessary background processes and applications get disabled to ensure that maximum memory and CPU resources are staked for your game.
- 2 Office mode.** System resources are allocated to your office and productivity applications to ensure maximum efficiency when you are busy with important work-related tasks.
- 3 Home mode.** Your computer gets optimized to better handle audio/video playback applications, browsers, messengers, Skype etc.
- 4 Advanced mode.** You can create your own optimization profile and give your PC a power boost for any custom situation. Save your preferred settings and use them whenever the other 3 scenarios don't fit.

To optimize your computer, position your mouse cursor over the mode you want and click on it.

Switching from one mode to another is just as simple and can be done by clicking on the new mode you want, which automatically disables the previously activated mode.

When optimization is not required, you can disable PCBooster with one click on the **'Disable'** button

Should you have any questions about Tweakbit PCBooster don't hesitate to email our dedicated customer support team 24/7. We are always happy to help.

Thank you,
