This is your guide to one of the most comprehensive sets of tools that will help keep your hard drive clean and free from digital clutter.

Installing TweakBit PCCleaner

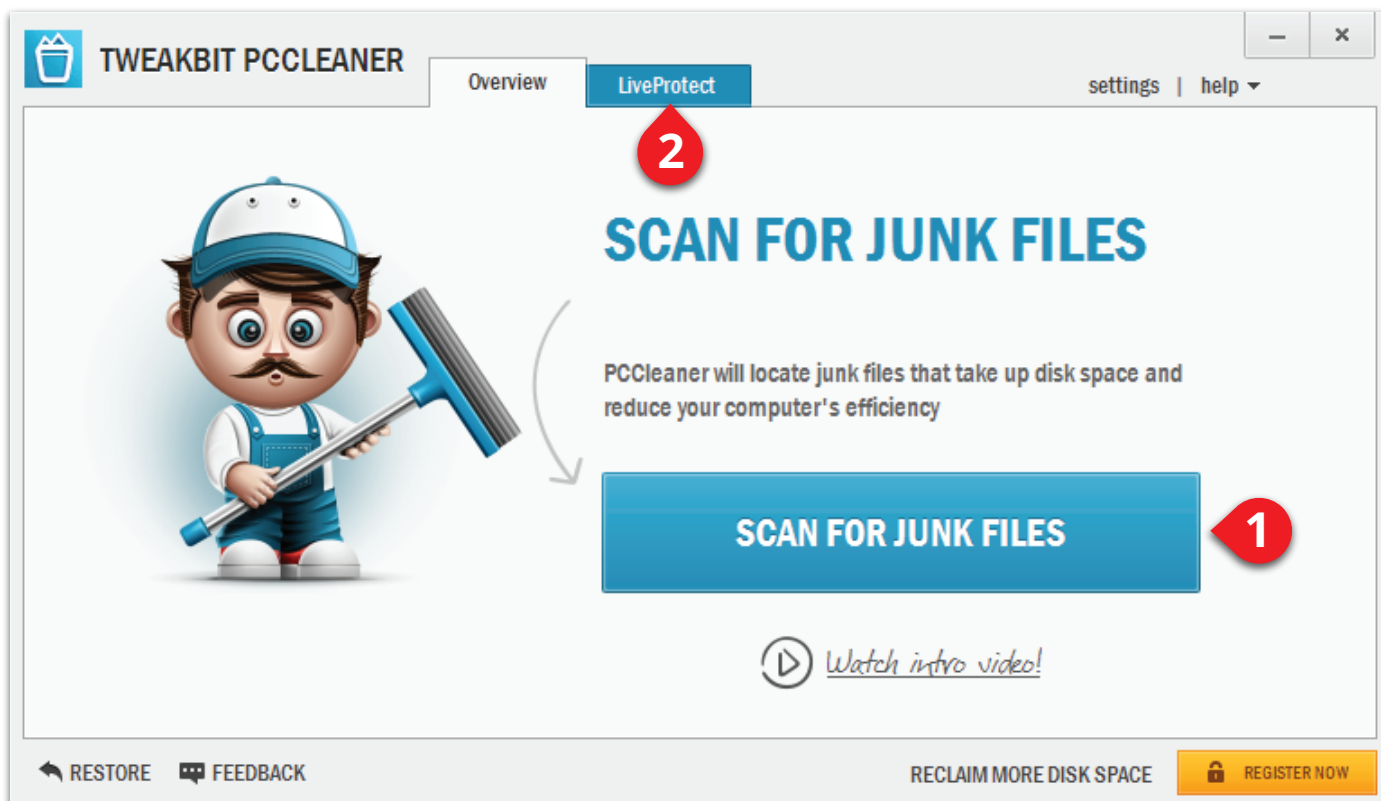

Before installation, please check that your computer meets the following system requirements:

-  Windows Win 8 (32 or 64 bit), Win 7 (32 or 64 bit), Vista SP2 (32 bit only), XP SP3 (32 bit only)
-  50 MB of available hard-disk space
-  512 MB RAM

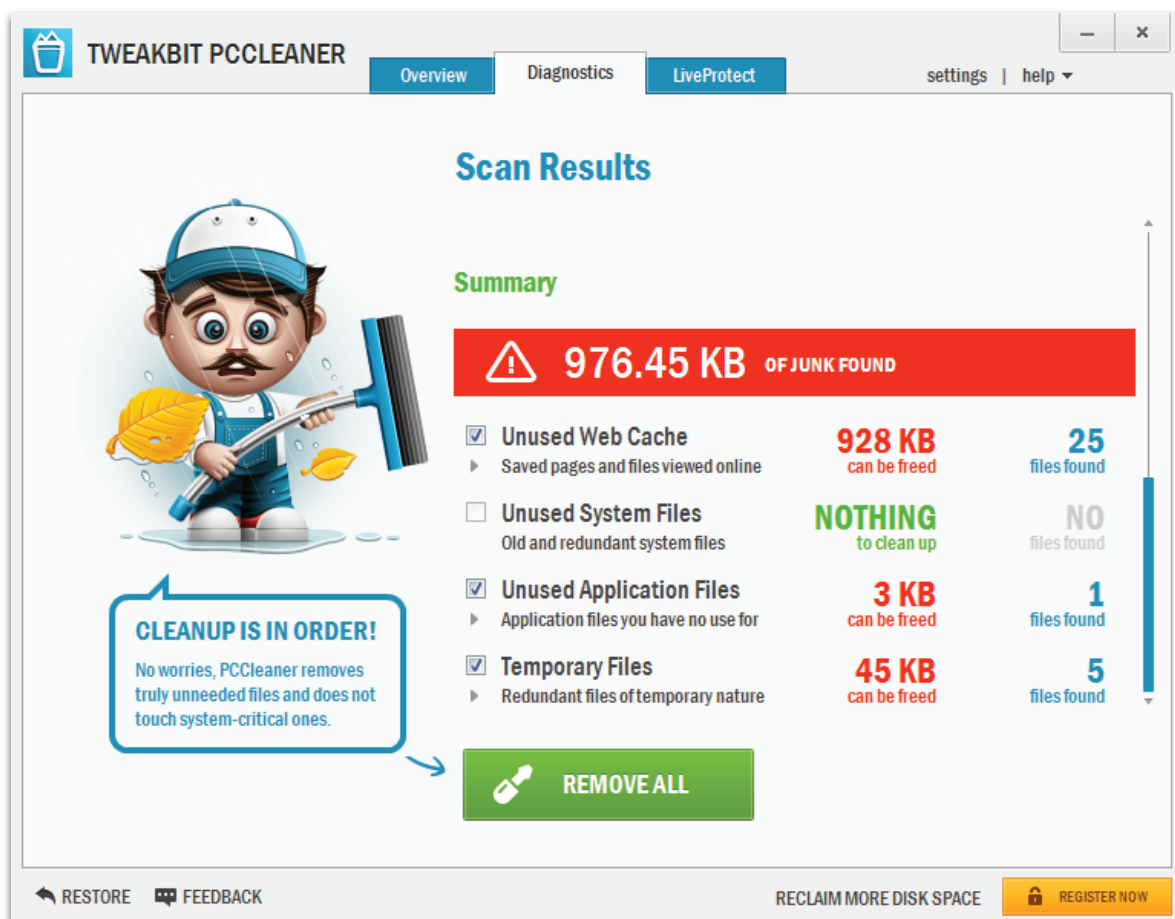

The installation process is very straightforward and won't take more than a minute to finish. To start installation, please press the **'Click to Install and Diagnose PC'** button. Before you do that, you can also check additional installation options by clicking on **'more options'**.

The program will start automatically when installation completes. You will be able to view an introductory video that shows what the program can be used for. If you prefer, you can skip the video by clicking on the Skip Intro link, which will take you straight to the main Overview window:

- 1 Start a full system scan immediately by clicking on 'Scan for Junk Files'
- 2 You can also switch to the LiveProtect tab to manage the four automatic tools that protect your disk space from clutter in real time.

While scanning, Tweakbit PCCleaner looks for various junk files that take up valuable storage space and clutter your hard drive. These junk files are split into four basic categories.

-  **Unused Web Cache.** As you browse the Internet, elements of pages you open get saved on your computer.
-  **Unused System Files.** As new system files are created, some older ones are no longer required for your computer's proper operation.
-  **Unused Application Files.** Applications you uninstall may leave some of their files on your computer.
-  **Temporary Files.** Windows creates them to hold information while a file is being worked on. Sometimes such files get left on your hard drive due to some error.

When the scan is complete, you can choose which issues you would like to fix.

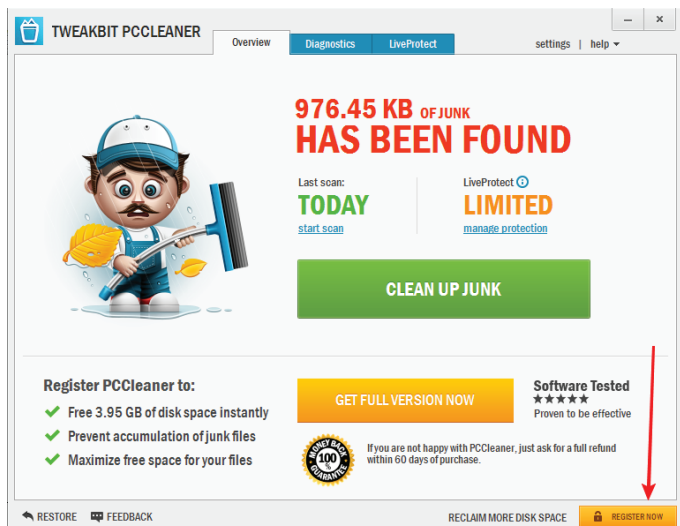

When enabled, these tools provide real-time disk space protection to keep your hard drive free from unnecessary data.

To enable a tool, drag its switch from left to right by clicking and holding it with the left mouse button. The activated switch will change its color from orange to green.

NB. Browser Temporary Files Cleanup and Turn off Hibernation tools can be used only when the program is fully registered. Please see next page for registration instructions.

You will need to register your product to unlock full functionality.

After purchase, you will receive an email with your license code.

Click on **'Register now'** in the bottom right corner. A pop-up will prompt you to enter your license code.

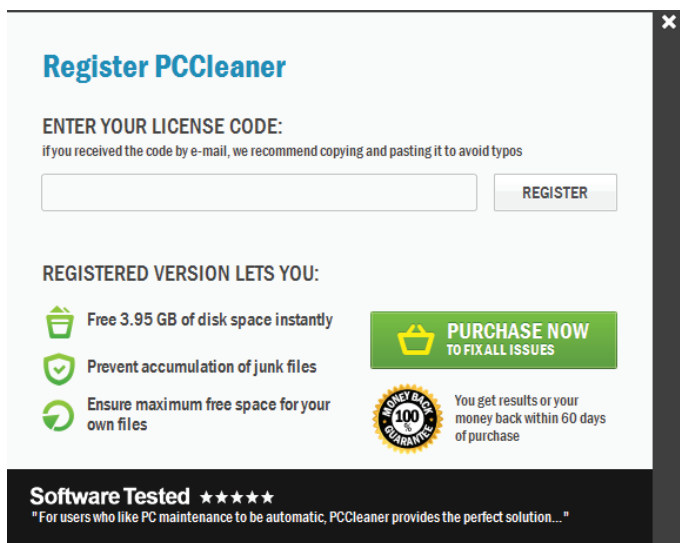

Find the license code that was sent to you in your order confirmation email.

Copy and paste* it directly into the registration field.

Once the license code has been entered, click **'Register'**. You will receive a confirmation that the application has been successfully activated.

* To copy and paste:

Highlight the license code by clicking the left mouse button in front of it and then dragging it to the right, until you have covered all of it.

When done, right-click on the highlighted area and select **'Copy'**.

Go back to TweakBit PCCleaner. Now you will need to right-click inside the registration field and choose **'Paste'**.

Should you have any questions about Tweakbit PCCleaner don't hesitate to email our dedicated customer support team 24/7. We are always happy to help.

Thank you,

Tweakbit
